DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR

1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR

1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8/16/2007 has been entered.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1, 35-60, 64 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the

Art Unit: 3692

inventor(s), at the time the application was filed, had possession of the claimed invention.

Re claims 1, 35: The Examiner could not find support in the specification for the newly added limitation, "wherein the primary multi-value card use, the secondary credit feature and any additional use features are linked as of the time the multi-value card is issued or activated. Specifically, the Examiner could not find support for what is meant by the term "linked".

Re claim 60,64: The amended claims call for the machinereadable format to include either a magnetic strip or an RFID
tag. There is no support in the originally filed specification
for this subject matter.

Claims 36-60, 64 are rejected because of their dependency to the rejected claims.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the

art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3. Claims 1 and 35-60,64 are rejected under 35 U.S.C.

103(a) as being unpatentable over Cunningham (US Pat 6,014,645)

in view of "Visa, MBNA and De La Rue Launch Multi-Function Smart

Card Program," De La Rue Pic 7/06/1998 (hereinafter De La Rue).

Re Claim 1: Cunningham discloses a method using a computer system for a real time customer activation of a value card having a primary feature wherein the system automatically processes a customer's activation of the value card (Column 2, lines 9-29), said system including a data entry processing center, a workstation, a graphical user interface, and a data storing means (SEE FIG 1) comprising the steps of:

- Receiving said customer's request into said system (Column 2, lines 15- 19)
- Providing at least one or more safety features to determine whether said customer is the person whose name is printed on said transaction card (Column 3, lines 23-26)
- Activating the transaction card by confirming the customers desire to " activate the primary value card use (Column 4 line 65-Column 5 line 5)

Application/Control Number: 10/618,249

Art Unit: 3692

• Wherein prior to the activation of the primary feature or any secondary features, the multi-value card contains or is associated with information related to the primary feature and the one or more optional secondary features (Abstract 'The applicant peruses the offers and chooses one that meets his or her needs." Perusing information associated with the primary card offer.)

Cunningham does not explicitly disclose the steps

- Wherein the value card is a multi-value card having a primary feature and at least one secondary feature; and
 Wherein the steps of offering the options of activating the transaction card by
- Determining the customer's election to add a secondary credit card feature; and
- Identifying the customer's request to activate any additional features;

AND

• Storing information related to each feature on the multivalue card in a machine-readable format.

wherein an application for the multi-value card is processed as part of integrated application process whereby the primary multi-value card use, the secondary credit card feature and any additional use features are established in response to a

single customer application and wherein the primary multi-value card use the secondary credit card feature and any additional use features are linked as of the time the multi-value card is issued or activated.

De La Rue discloses a Visa smart card that will place the functions of several traditional bankcards onto a single microchip (single card; machine readable format). These additional features include a credit feature, a stored cash feature and a rewards program. De La Rue further includes the step of determining the customer's election to add a secondary credit card feature; and identifying the customer's request to activate any additional features in the discussion of allowing up to nine different reward programs on the smart card. Specifically noted is that the applications of such programs can be changed to target different cardholders (Page 1; paragraph 3). Furthermore, it is obvious from the teachings of De La Rue that all of the functions on the bankcard will be in effect once the card is activated because the purpose of the smart cards is to offer customers a combination of features on the cards rather than opt for single feature cards i.e., standard credit cards. De La Rue further teaches "Advanced smart cards promise merchants and issuers tremendous marketing and customer retention opportunities and offer consumers a new level of

convenience and financial flexibility."-see p. 2 para. 3. It would have been obvious to anyone skilled in the ordinary art at the time of invention to include the teachings of De La Rue to the disclosure of Cunningham to create a real time credit card application system and method that would include a multifunction credit card. Cunningham is concerned with locating offers for financial cards for customers. De La Rue discloses a type of financial card with multiple features. Therefore a person of ordinary skill in the art would be motivated to include the card of De La Rue into the system of Cunningham since it represents a certain type of financial card that customers might be interested. By including a number of different financial card offers to the customers, Cunningham increases the odds that an appropriate match can be made, which is the ultimate motivation for the invention (Cunningham Abstract).

Re Claim 35: Cunningham discloses a computerized (SEE FIG

1) real time financial card application system comprising:

- A first activation activating at least one feature of the multi value card (Column 2, lines 9-29; activation is inherent in the acceptance of the offer)
- Allowing the customer to use the multi value card as a card having only said at least one feature (Column 2, lines 24-26). The step of accepting an offer indicates the customers

intention to use the features of the cards (i.e. credit or debit feature)

• Wherein prior to activation of any features, the multi-vale card contains or is associated with information related to the different features (Abstract "The applicant peruses the offers and chooses one that meets his or her needs." Perusing information associated with the primary card offer.)

Cunningham does not explicitly disclose wherein the value card is a multi value card nor does Cunningham disclose the step of offering to the customer a subsequent activation of the multi value card to add at least a second feature or storing information related to each feature on the card in a machinereadable format. De La Rue discloses a Visa smart card that will place the functions of several traditional bank cards onto a single microchip (single card; machine readable format). These additional features include a credit feature, a stored cash feature and a rewards program. Furthermore De La Rue discloses the step of allowing up to nine different reward programs on the smart card. Specifically noted is that the applications of such programs can be changed to target different cardholders (Page 1; paragraph 3). It would have been obvious to anyone skilled in the ordinary art at the time of invention to include the teachings of De La Rue to the disclosure of Cunningham to create

a real time credit card application system and method that would include a multifunction credit card. It would be obvious then that a customer would have the ability to activate the different features that they desire so that they can have a single transaction card that is capable of performing functions that they deem appropriate.

The newly added limitation is rejected as in claim 1 above.

Re Claim 36: Cunningham in view of De La Rue discloses the claimed method supra and De La Rue further discloses wherein said features enable the customer to establish direct relationships with different companies (Entire article, specifically paragraphs 2 and 4)

Re Claim 37: Cunningham in view of De La Rue discloses the claimed method supra and De La Rue further discloses wherein at least one feature offered for activation is a transaction card enabling the customer to establish a direct relationship with an individual company (See paragraph 4; rewards features at particular merchants represent a direct relationship with an individual (particular) company).

Re Claim 38: Cunningham in view of De La Rue discloses the claimed method supra and Cunningham further discloses wherein at

Art Unit: 3692

least one feature offered for activation is a credit card feature (Column 1, lines 15-17).

Re Claim 39: Cunningham in view of De La Rue discloses the claimed method supra and De La Rue further discloses wherein at least one feature is a rewards feature (Paragraphs 2 and 4)

Re Claim 40: Cunningham in view of De La Rue discloses the claimed method supra and while not explicitly disclosing sending the customer a card imprinted with the customers name in a direct mailing marketing piece, Cunningham does disclose the use of direct mailing for transaction cards (Column 1, lines 15-42) and it was notoriously well known, and therefore obvious to anyone skilled in the ordinary art at the time of invention, to include a preprinted card with the direct mailing information so as to expedite the time in which a customer can actually use the card. Without the preprinted card, the customer would have to wait for an additional piece of mail containing the physical card with their name.

Re Claim 41: Cunningham in view of De La Rue discloses the claimed method supra and De La Rue further discloses the step wherein at least one feature activated during said first activation is a transaction card feature and at least one feature activated in a subsequent activation is a credit card feature (End of Paragraph 1)

Application/Control Number: 10/618,249

Art Unit: 3692

Re Claim 42: Cunningham in view of De La Rue discloses the claimed method supra and De La Rue further discloses wherein said transaction card feature includes a rewards feature (End of Paragraph 1).

Page 11

Re Claim 43: Cunningham in view of De La Rue discloses the claimed method supra and while not explicitly disclosing wherein said rewards are based on a percentage of total amount spent during each transaction, this method for distributing rewards points on a credit card is notoriously well known in the art and would therefore be obvious. In providing this method for distributing rewards points, customers are encouraged to spend more, with the idea that they will "get more back" in return.

Re Claim 44: Cunningham in view of De La Rue discloses the claimed method supra and De La Rue further discloses wherein the rewards feature can be redeemed or spent at a specific vendor (Paragraph 4; see dinner entree example)

Re Claim 45: Cunningham in view of De La Rue discloses the claimed method supra and De La Rue further discloses wherein the rewards feature can be redeemed or spent at several vendors (Paragraph 4; "merchants").

Re Claim 46: Cunningham in view of De La Rue discloses the claimed method supra and De La Rue further discloses wherein the rewards feature can be redeemed or spent at any vendor or

merchant who accepts the logo printed on the transaction card (paragraph 4).

Re Claim 47 and 48: Cunningham in view of De La Rue discloses the claimed method supra and De La Rue further discloses wherein the rewards are credited against at least one of the other features of the card (paragraph 4; This essentially defines the rewards feature; purchasing a product with rewards points reduces the secondary credit balance up to the amount of the purchase).

Re Claim 49: Cunningham in view of De La Rue discloses the claimed method supra and while not explicitly disclosing wherein the customer must agree to establish a credit account with a payment amount source in order to activate the primary transaction card use, De La Rue discusses the combination of a credit, stored value and loyalty functions onto a single smart card (paragraph 1), which means that these accounts are in fact established with a payment amount source prior to any other use.

Re Claim 50: As previously noted in the rejection of Claim 8, the multi function smart card combines the credit (credit card); stored value (debit card) and loyalty functions onto a singe card, which establishes the payment amount sources as these particular cards. While not explicitly disclosing that the payment amount source is a check, it was well known in the art

Art Unit: 3692

at the time of invention that often times a debit card is liked to a standard checking account, from which paper check can be written, and in a sense a debit card is just an electronic version of a paper check.

Re Claim 51: Cunningham in view of De La Rue discloses the claimed method supra and while not explicitly disclosing wherein the customer may automatically recharge the primary amount source when the payment source is depleted, this step was well known in the art at the time of invention. It has previously been established that the payment source can be either a debit card or a personal check that are almost always linked to a standard checking account a particular bank. The step of automatically recharging the amount source when the payment source is depleted is therefore just a simple deposit of money into the account through an automated means such as a automatic deduction from a paycheck that is normally directly deposited in to the account, a process that was notoriously well known in the art.

Re Claim 52: Cunningham in view of De La Rue discloses the claimed method supra and while not explicitly disclosing wherein the payment amount source is the secondary credit card feature, it was established in the rejection of claims 10-12 that the payment amount source may be one of a credit card or debit card.

De La Rue discloses that the multi purpose card can have a credit / stored value hybrid card, wherein the stored value card acts as the secondary feature. It would therefore be obvious, through the transitive property, that if the debit card can be the payment amount source as the secondary credit feature.

Re Claim 53: Cunningham in view of De La Rue discloses the claimed method supra and Cunningham further discloses wherein said activation steps include the use of telephone, Internet, personal computer means or a combination thereof (Column 2, lines 15-17)

Re Claim 54: Cunningham in view of De La Rue discloses the claimed method supra and while not explicitly disclosing mailing a direct marketing mail piece containing an inactive multi value card and directing the customer to contact the automated activation process center to activate the card, Cunningham does disclose the use of direct mail marketing (Column 1 lines 15-42), and it was well known in the art at the time of invention that direct mail marketing for credit cards includes an inactive card as well as instructions for activating said card. It therefore would have been obvious to anyone skilled in the ordinary art to include this feature with the disclosure of Cunningham in view of De La Rue so that the additional steps of mailing an active card to the customer can be eliminated,

Art Unit: 3692

therefore making the process much more efficient.

Re Claim 55: Cunningham in view of De La Rue discloses the claimed method supra and while not explicitly disclosing the step of initiating an automatic numbering identification system, this process was old and well known in the art at the time of invention as a way to relate specific customers to a specific transaction card or account. If a numbering identification system were not present, it would be difficult to track customer accounts and also leave customers vulnerable to fraudulent activities from third parties.

Re Claim 56: Cunningham in view of De La Rue discloses the claimed method supra and De La Rue further discloses the step wherein said first activation includes offering the customer an option to activate a primary transaction card feature, a credit card feature, an additional feature or combinations thereof (Paragraphs 1-2).

Re Claim 57: Cunningham in view of De La Rue discloses the claimed method supra and while not explicitly disclosing the step of updating the processing and statement account records, this step would have been obvious to anyone skilled in the ordinary art at the time of invention so as to have an up to date record of customer activities. If the account records were not updated on a regular basis, a customer could, for example

Art Unit: 3692

exceed his maximum limit.

Re Claim 58: Cunningham in view of De La Rue discloses the claimed method supra and Cunningham further discloses an eligibility check (Column 2, lines 11-15; "meet specific criteria"). While not explicitly disclosing wherein the check is to determine whether or not the card has already been activated and what features if any have already been activated, this step would have been obvious to someone skilled in the ordinary art at the time of invention to prevent redundant offers from being sent to customers. If a customer has already activated a particular feature on the transaction card, it would be a waste of time and money to contact them with offers for that same feature. Furthermore, checking on these features will allow the company to solicit appropriate offers to customers since they will have a record of which features the customer does not have as well.

Re Claim 59: Cunningham in view of De La Rue discloses the claimed method supra but does not explicitly disclose the step of offering at least one rebuttal offer for activation of a different feature if an offer for activation of a feature is declined by the customer. However, this step would be obvious to anyone skilled in the ordinary art at the time of invention, so that the company can both inform the customer of all potential

Page 17

Application/Control Number: 10/618,249

Art Unit: 3692

features and also maximize their potential revenue. The point of offering multiple features on one card is to claim a larger share of a particular customers financial business. If a company did not provide a counter offer to a customer, should they decline an initial offer, the company could be losing out on revenue from a different feature that the customer would be more inclined to accept.

Re Claims 60,64: Cunningham in view of De La Rue discloses the claimed method supra but does not explicitly disclose the steps wherein the machine readable medium format comprises a magnetic strip, an embossment, visible printing, and an RFID tag, a smart chip or any combination thereof. However, while De La Rue discloses the use of a smart chip feature, this is disclosed as a substitution for the "traditional magnetic stripe bankcards. (Page 2)." Therefore it would have been obvious to anyone or ordinary skill in the art to substitute the smart chip feature for the more traditional magnetic stripe as a simple design choice. Since the magnetic strip cards are more familiar to most merchants, most would be more comfortable with this format initially, at least until the smart chip card is widely implemented.

Art Unit: 3692

Response to Arguments

4. Applicant's arguments with respect to claims 1,35 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elda Milef whose telephone number is (571)272-8124. The examiner can normally be reached on Monday -Thursday 8:30 am to 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kambiz Abdi can be reached on (571)272-6702. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
